# Operation and Maintenance

Nüsing Flexi 60 folding wall

Nüsing – movable wall technology

### To close the folding wall:

1. Pull the first two panels out of the stack until they are almost in line with the track.
2. Carefully push the front profile of the door panel towards the door jamb post to make the wall as straight as possible.
3. Fully straighten out the wall from the lock side and lock the floor bolt with the key to stabilize the wall.
4. The last panel before the door panel locks at both top and bottom. (Espagnolette action)
5. Finally close the door against the door jamb post.

### To open the folding wall:

The procedure for opening the folding wall is exactly the opposite to the closing procedure above

### Hints and tips on operation:

- The walls should only be operated by fully trained personnel.
- Never use force when handling the wall.
- Remember to lock all floor bolts for the wall to function properly.
- Our folding walls are basically maintenance free, but to ensure a long and trouble free life we recommend an annual check by our service team.
